What Harm do Fluorescent Agent do to Human Body ?

Unlike common chemical composition, fluorescent agent is not easily be broken. It let them accumulate in human body, they can dramatically weaken human' s immune ability. For example, if fluorescent agent bind protein, it will hinder the wound outside from healing; fluorescent agent can make human cells occur variability tends; if the toxicity cumulate in the liver or other vital organs, it will become a potential carcinogen, causing damage to the blood system: chemical substances that can contaminate human blood, will destroy the red blood cell membrane, causing hemolytic disease.
